EDUCATION

BMS College of Engineering

Bachelor of Engineering in Electronics and Telecommunication

Bengaluru

Nov. 2022 – Jun. 2026

Delhi Public School, Bhilai

AISSE – Class XII – PCM | AISSE – Class X

Bhilai

2022 | 2020

EXPERIENCE

Software Engineer

CreatorJoy.com

Jan. 2026 – Jun. 2026

Remote

- Sole owner of AirClone's frontend architecture; migrated onboarding off Supabase Edge Functions, n8n, and Realtime onto a REST + BFF proxy layer.
- Diagnosed a race condition double-triggering the AI pipeline, wasting paid calls to 2 AI providers per session; fixed it with a ref-based idempotency guard which saved 50% API cost.
- Implemented Tyk API Gateway to enforce trust boundaries, validate sessions, inject signed headers, and isolate microservices from client access, cutting unauthorized requests by 30%.
- Designed the client-side caching strategy with TanStack Query: structured query keys enable targeted invalidation, so profile mutations auto-refetch dependent auth state instantly; Designed server-side session-cookie handling which reduced latency by 25% across 1.8k active sessions.
- Built a Backend-for-Frontend proxy enforcing gateway-only access across 3 backend services via httpOnly cookies; managed GCP Secret Manager, fixing CI/CD secret-mapping defect.
- **Tech:** TypeScript, Next.js, Python, TanStack Query, Supabase (PostgreSQL), REST APIs, TYK API Gateway, GCP Secret Manager & Cloud Run, GitHub Actions

PROJECTS

MARGIN – JSON Compressor | *Python, Tiktoken, MCP, LLM Evaluation Harness, JSON RPC*

[GitHub](#)

Aug. – Sept. 2026

- Cut LLM prompt tokens 41.6% across 8 live APIs with a rule-based JSON compressor; never worse than input.
- Raised savings to 73.7% by offloading bulk values to a content store the model fetches over MCP..
- Built a blinded 3-arm LLM eval harness with a control-gated judge; compressed scored 75/75 vs. raw.

News Aggregator | *Next.js 14, Python, DistilBERT, Feedparser, GitHub Actions, Vercel*

[Live App](#) | [GitHub](#)

Jan. 2026

- Built an AI pipeline using Hugging Face Transformers to auto-categorize news into socio-political categories.
- Automated daily data retrieval via GitHub Actions workflows, maintaining a live archive of 200+ curated stories.
- Designed Responsive UI: Built dynamic Next.js 14 layouts with Tailwind CSS for cross-device experiences.

AI Music Genre Classifier App | *Python, TensorFlow (Keras), Scikit-learn, Streamlit, Git*

[Live App](#) | [GitHub](#)

Oct. – Nov. 2025

- Developed a pipeline to classify music genres, trained a CNN on Mel Spectrograms generated from raw audio.
- Engineered a robust training dataset using advanced audio augmentation to improve model accuracy up to 72%.
- Deployed a Streamlit web app enabling real-time prediction from custom user audio with data visualizations.

ACHIEVEMENTS

Cost Optimization: Engineered custom agent workflows, cutting company operational and API expenses by 30%.

Project Exhibition: Lead my team to represent my department in NMIT, Bengaluru for Tech Summit in Jun. 2025

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL, C/C++, HTML/CSS

Frameworks: React, Next.js, Node.js, TanStack Query, Tailwind CSS, FastAPI, Flask, TensorFlow (Keras), Scikit-learn

Developer Tools: Git, Docker, Kubernetes, Google Cloud Platform, GitHub Actions, Amazon Web Services
